ACADEMIC PROJECT DETAILS

- **Project name:** Design and Analysis of a Residential Building (G+1)
- **Tools of implementation:** Auto CAD, STAADPRO.
- **Role:** Team Leader.

Description: The principle objective of this project is to analyze and design a multi storied building (G+1) using Staad Pro. The design involves load calculations manually and Analyzing the whole structure by Staad pro. The design methods used in Staad pro analysis are limit state design conforming to Indian standard code of practice. Staad pro features a state-of-the-art user interface, visualization tools, powerful analysis and design engines with advanced finite element and dynamic analysis capabilities. From model generation analysis and design to visualization and result verification. Staad pro is the professional's choice. Initially we started with the analysis of simple 2-dimensional frames and mutually checked the accuracy of the Software with our results. The results proved to be very accurate we analyzed and design a G+1 storey building (2-D Frame) initially for all possible load combinations (dead and live).
